## Profile Summary:

- I am a technology enthusiast who likes to learn and engineer products. With more than 12 years in the technology industry I have worked with programming languages like Java, Python, C, Rust, NodeJS, PERL and PL/SQL. I am passionate towards technology which drives me to build solutions for my clients and for myself on open source platforms.
- I have hands-on experience in working with different technologies and frameworks with some of my popular choices being Spring Boot, JAX-WS, JAX-RS, Microservices, Spring, JDBC, Hibernate, Flask, SQLAlchemy, Marshmallow, Docker and Kubernetes.
- Embedded systems and IoT have caught my attention recently and I have devoted time to build products utilizing my skills with MicroPython.
- I have good experience with migrating legacy systems to microservices based architecture on AWS Cloud using Serverless services like Lambda, S3, DynamoDB, Aurora PostgreSQL, ECS and API Gateways.
- I have experience with building ETL Jobs using AWS Glue and building Datalakes using DMS, SQS, Lambda and S3.
- Experienced in Singleton, Prototype, Facade design patterns in the Multi-Tier distributed Enterprise Applications.
- Experienced in modeling, design and development of Stored Procedures, Views, Schemas in relational databases.
- Experienced in embedded systems programming on Raspberry Pi Pico (RP2040) and ESP8266.

## Education:

### School & University

2010: Bachelor of Engineering – Information Technology, Mumbai University, Mumbai

2007: Diploma – Computer Technology, Education Society's Polytechnic (VESP), Mumbai

## Certifications:

### Certificates

April 2023: AWS Certified Cloud Practitioner

August 2022: AWS Certified Solutions Architect - Associate

September 2020: Microsoft Azure Fundamentals Certification

---

## Skills/Specialization:

| Domain                     | Skill and Specialities                                                                                                        |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Programming - Languages    | Java, Python, C, Rust, NodeJS, Perl, SQL, PL/SQL                                                                              |
| Programming - Frameworks   | Spring Boot, Spring Cloud, Flask, Spring, Java Servlets, Struts                                                               |
| Programming RMI            | JAX-WS, REST, Spring RMI, Microservices, AJAX, EJB, IBM MQ, DMaaP Data Router and Message Router, AWS SQS.                    |
| Programming - UI           | Javascript, Angular, HTML/CSS, Java Swing                                                                                     |
| Programming - ORM          | JDBC, Hibernate, JPA, SQLAlchemy                                                                                              |
| Programming - Unit Testing | Junit, Mockito                                                                                                                |
| Build Tools                | Ant, Maven, Github Actions                                                                                                    |
| Server Infrastructure      | IBM Websphere Application Server, IBM Websphere Portal Server, Apache, JBoss EAP, Oracle Weblogic                             |
| Cloud Computing            | Docker, Kubernetes, Amazon Web Services (AWS)                                                                                 |
| Methodologies              | Agile, DevOps                                                                                                                 |
| Operating Systems          | Linux                                                                                                                         |
| Database/Storage           | Oracle SQL, PostgreSQL, Aurora, S3, DynamoDB                                                                                  |
| Tools                      | Eclipse, IntelliJ, PyCharm, VS Code, IBM RAD, Postman, SOAP UI, Putty, iTrack, JIRA, XML Spy, Contivo Analyst, Splunk, JMeter |

## Open Source Projects:

- **Expense Report Generator** – This app will parse your credit card statements and categorize them for better visualization of monthly expense. This app is deployed on AWS cloud, fully CI/CD enabled using Github actions and is entirely serverless using API Gateway, Lambda, DynamoDB, S3, SQS.  
Github - <https://github.com/pawanJ09/expense-report-generator>
- **Stocks Crypto Data** - An app that is built using Python web scraping and deployed on AWS ECS which stores the historical data of all pre-defined stocks/cryptos while also providing services to get the current stock listings.  
Github - <https://github.com/pawanJ09/stocks-crypto-data>
- **Weather App** – A command line utility that shows the current weather and week's forecast for the requested city. This utility is built using Python web scraping. Github - <https://github.com/pawanJ09/weather-app>
- **Motion Sensor** – A homemade motion sensor that can be setup as a burglar alarm created using a PIR Motion Sensor, Raspberry Pi Pico RP2040 microcontroller and Micropython. Github - <https://github.com/pawanJ09/motion-sensor>
- **Room Temperature Sensor** – A smart temperature and humidity sensor built for small rooms created using DHT11 sensor, Raspberry Pi Pico RP2040 microcontroller and Micropython. The sensor is attached to an LCD

display and has smart logic to turn on the display and show the current temperature along with humidity if you go in the range of the device minimizing power use to keep LCD always turned on. Github -

<https://github.com/pawanJ09/temperature-sensor>

- **JWT Generator** – This utility project built using Java can be used to generate JSON Web Token(JWT) using private key, keystore alias and keystore password. Github - <https://github.com/pawanJ09/jwt-generator>
- **WSSE SOAP Header Generator** – This utility project built using Java can be used to generate WSSE Security Header that can be attached to your SOAP requests. Github - <https://github.com/pawanJ09/wsse-soapheader-generator>

## Work Experience:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                            |

| <ul style="list-style-type: none"><li>• <b>Project Description:</b><br/>Modernizing applications and infrastructure for Vanguard which has one of the world's largest mainframe systems with DB2 integration and migrating to AWS Cloud. As part of the team that I am working with it I am responsible for creating a Datalake Hydration Strategy for the RDS data currently residing on Aurora PostgreSQL. Along with Datalake Hydration Strategy also working on modernizing the trading path for Vanguard Mutual Funds thereby creating an interim state with legacy services invoking the cloud enabled services on AWS.</li><li>• <b>Roles &amp; Responsibilities:</b><ul style="list-style-type: none"><li>• Leading discussions with clients around scope of the problem statement and based on this discussion modelling the Datalake hydration architecture on AWS Cloud.</li><li>• Creating POCs to vet the architecture using Serverless services like S3, DMS, SQS, Lambda, Glue.</li><li>• Develop Lambdas and Glue Jobs using Python for converting data from raw CSV to Parquet format and store in buckets.</li><li>• Create API endpoints for feeding data into the cloud database for modernizing trade paths. APIs currently deployed on AWS API Gateway, Lambda and ECS Clusters.</li></ul></li></ul> |                            |
| <b>Client: Deloitte Consulting, Chicago IL</b><br><b>Role: Specialist Senior</b><br><b>Project: Indeed</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Oct 2021 – Jan 2022</b> |
| <ul style="list-style-type: none"><li>• <b>Project Description:</b><br/>With this project I worked on creating an integration between Indeed and Workday to provision applicants to apply to Workday Jobs from Indeed using Indeed Apply feature. This feature would allow the job applicants to apply to Job postings without having to leave the Indeed ecosystem.</li><li>• <b>Roles &amp; Responsibilities:</b><ul style="list-style-type: none"><li>• Involved in discovery, design and development phases of the project.</li><li>• Worked on designing the authentication framework between Indeed and Workday using OAuth with JWT.</li></ul></li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                            |

- Single handedly developed 3 modules as part of this integration which included Job Ingestion (polling jobs from Workday into Indeed), Put Candidate (Post candidate from Indeed to Workday) and Candidate Disposition (Poll candidate status after posting to the job).
- Developed these modules using Maven and Java 11 with JAX-WS libraries for generating clients using Workday wsdl and xsd.

**Client: Deloitte Consulting, Chicago IL**

**June 2021 – Oct 2021**

**Role: Specialist Senior**

**Project: Dell Inc**

- **Project Description:**  
On this project with Dell Inc I was assigned to a team which was responsible for creating VMaaS (VM as a Service) on Dell's private Cloud. This product would streamline the process of allocating VMs to Dell's IT Infrastructure.
- **Roles & Responsibilities:**
  - Involved in proposing design approach and estimations.
  - Worked on developing services using Java Spring Boot and Spring Hibernate to fulfill provisioning requests from the Dell Digital Cloud portal and persisting VM statistics to PostgreSQL instances for enabling the provisioning of VM on the clusters.
  - Created RabbitMQ integration across modules to receive cluster statistics and persist them real time in PostgreSQL database.
  - Worked on containerizing the services using Docker and create deployments for K8 cluster.

**Client: Digital Technology Solutions, St Louis MO**

**April 2021 – June 2021**

**Role: Senior Software Developer**

**Project: Ally Enterprise Communications**

- **Project Description:**  
Ally Enterprise communications team is responsible for handling real time and scheduled communications to its clients and stake holders. This top provides one stop shop across the enterprise to engage with other teams and design solutions around processing communications.
- **Roles & Responsibilities:**
  - Creating microservices for fulfilling customer notifications from variety of business lines. Developing services using Java 8 and NodeJS.
  - Worked on creating unit test cases using Junit Jupiter and BDD tests using Cucumber.
  - Worked on deploying and maintaining application on AWS Cloud using Lambda, S3, RDS, Dynamo DB, SQS and SNS.
  - Creating deployment strategies and pipelines using Terraform and Jenkins.

**Client: Accenture, St Louis MO**

**March 2019 – April 2021**

**Role: Application Development Specialist**

**Project: MyAT&T Application Suite**

- **Project Description:**  
AT&T is a leading telecom service provider in United States. The MyAT&T suite of applications includes

consumer facing att.com and its subsidiary applications like OPSS (Online Post Sales Support) for activations, agreements and warranty exchanges. This suite also includes an agent facing application which the on-call agents can use to lookup customer information and assist customers with their problems and queries for online att.com.

- **Roles & Responsibilities:**

- Worked on different Java technologies and frameworks like Spring MVC, Struts, Hibernate, JSP, EJB, Servlets and Portlets across multiple server technologies like Oracle Weblogic, IBM Websphere Application Server and IBM Websphere Portal.
- Worked on migration of legacy applications to Microservices based architecture on Kubernetes platform using Spring Boot and Spring security.
- Worked on Cloud migration by migrating existing Jenkins Pipelines to AWS with S3 and AWS SQS.
- Worked on database migration from Oracle to MySQL on AWS using AWS DMS.

**Client: Accenture, Schaumburg IL**

**April 2014 – March 2019**

**Role: Application Development Specialist**

**Project: EDGE – Enterprise Dispatch GUI Environment**

- **Project Description:**

AT&T is a leading telecom service provider in United States. The application portal is used by client's LBM (Load Balance Manager) and/or Area Managers to schedule technicians, create & assign jobs, dispatch technicians on the jobs and close jobs or tickets logged from the telecom service users.

The application provides ability to Area Managers to dispatch and close these tickets by performing multiple activities from application portal in interacting with multiple middleware, legacy systems and other supporting applications to retrieve information about each job/ticket.

- **Roles & Responsibilities:**

- Extensively worked on integrating DTV dispatching application (Click) with AT&T dispatching on merger of AT&T with DTV.
- Worked on migrating legacy application to microservices based architecture using DevOps and CI/CD Pipelines using Jenkins on Kubernetes platform.
- Worked on migrating application frontend from Java Swing to Angular 2.0 and backend from Spring RMI to JAX-RS and JAX-WS.
- Worked on different server technologies like JBoss EAP, IBM Websphere Application and Portal Servers to transition application from legacy to new stack.
- Worked on implementing DMaaP Data Router and Message Router for interfacing with downstream applications.
- Worked on Perl scripts to identify issues and alert to support Post production validations and deployment on Unix and Linux servers.
- Used tools like Contivo Analyst, XML Spy and SOAP UI for quick turnaround of services along with unit testing for the application migration from legacy to new stack.
- Extensive experience working on IBM MQs and using JMS to interface with the MQs.
- Extensively worked on creating oracle schemas, views, procedures and triggers for modelling backend calls with Oracle SQL RDBMS.
- Worked on replication technologies like SQDATA and GoldenGate.

**- Project Description:**

AT&T is a leading telecom service provider in United States. The application portal is used by client's LBM (Load Balance Manager) and/or Area Managers to schedule technicians, create & assign jobs, dispatch technicians on the jobs and close jobs or tickets logged from the telecom service users.

The application provides ability to Area Managers to dispatch and close these tickets by performing multiple activities from application portal in interacting with multiple middleware, legacy systems and other supporting applications to retrieve information about each job/ticket.

**- Roles & Responsibilities:**

- Worked on the backend portion of application which involved analysis and debugging of code in C thereby expanding my application and programming knowledge.
- Extensively worked on IBM Application Server and IBM Portal Server for EAR/WAR Installations, Data source setup, URL setup, User Configurations, Tracing and Logging setup.
- Worked on the migration of application from Portal (Web based) to Swing (Desktop based) i.e. Websphere Portal Server to Application Server.
- Developed business logic using Java, Java Swing, JDBC, Java Spring, Java Scripting, HTML, Web services, SQL and PLSQL. Tools used were IBM RAD, Eclipse, Toad for Oracle and SOAP UI.
- Created tools for File Version checks and pre-Deployment Package validations to identify issues with build and deployment.
- Worked in post-production defect analysis and developed solution working in Java, JDBC, JSP Portlets and Servlets hosted on IBM Websphere Portal Server.
